

New developments in the driving simulator sector inspires Rozendom Technologies BV

## Unique driving lessons and innovative training possibilities

Traffic is in continuous movement. In respect of road safety, much has been achieved in recent years. But with increasing mobility, it continues to be an important item of attention in the field of traffic issues. Rozendom technologies BV have been providing excellent creative solutions for simulators for cars, trucks, busses and motorbikes for many years. The challenge we face is to continue delivering top performance. In this way, we have theoretical knowledge and relevant practical experience coupled with the state of the art. In addition to ready-to-use products, custom-made solutions for the client are no exception.

On 25 February 2010, Rozendom technologies BV signed a unique and exclusive collaboration contract with Korea for the construction of new simulators.

### The unique interactive driving simulator for driving lessons, claim prevention and rescue services.

In recent years we have been hard at work developing a unique interactive driving simulator. This has been done in collaboration with, among others, TNO as knowledge institute in the field of functional and technical aspects. This driving simulator can be used in all forms of driving instruction courses, such as obtaining a driving licence, damage prevention or for the rescue services.

### The new way to drive

In the meantime, our products are used worldwide. In the Netherlands, our simulators are used on a large scale by the Dutch Automobile Association. With the simulators, it is possible to train in traffic knowledge, vehicle reconnaissance and control, visual technology, traffic insight, driving skills and 'The new way of driving'.

For more information, you are welcome to contact us.

- Mobile simulators; the ideal solution for driving schools
- Use of original materials in simulators for trucks, cars, busses and motorbikes
- Excellent support and service
